

Model RBA7730-999-003

Materials & Features

When holes for basin-mounted soap dispensers are properly situated, the spout of soap dispenser will project over the basin so there is sufficient space for hands and no soap can collect on the rim of the bowl or the countertop.

Bobrick's B-822, B-8221 group of dispensers are so designed that the standard unit will span most self-rimming bowls with adequate clearance to operate the piston. There are a few higher-than-average self-rimming bowls now on the market, and to clear those may require a spacer. RBA can supply Part No. RBA7730-999-003, which will elevate the dispenser 25mm.

The spacer also can be used if the installer has drilled the hole too far away from the bowl, making it difficult to place hands between the spout of soap dispenser and the rim of bowl or the countertop.
